

Mouse, the Language

[URL: http://primepuzzle.com/mouse/mouse.html](http://primepuzzle.com/mouse/mouse.html)

Last changed on Saturday, December 21, 2019

Mouse is a tiny stacked-based language created by Peter Grogono in 1979. His book, "MOUSE: A LANGUAGE FOR microcomputers" (PETROCELLI BOOKS, INC.) is the definitive reference on this language.

This tutorial should give you enough information so you can write and run programs in this very interesting language.

Note: The following is what I do to get into my development environment. I use Peter Schorn's Altair 8800 (Z80) simulator.

```
d:\star\putty.exe
```

```
login as: primepzl
```

```
primepzl@november.he.net's password:
```

```
Last login: Sat Dec 21 02:36:30 2019 from 32.218.25.192
```

```
primepzl@november:~$ cd public_html/linux/
```

```
primepzl@november:~/public_html/linux$ ./altairz80l64
```

```
Altair 8800 (Z80) simulator V4.0-0 Beta          git commit id:      2203
```

```
sim> do nzcom
```

```
nzcom 10/21/17
```

```
64K CP/M Version 2.2 (SIMH ALTAIR 8800, BIOS V1.25, 2 HD, 15-Jan-07)
```

```
A>beginb
```

```
NZBLITZ loader vers 1.5
```

```
Hi!
```

```
A0:COMMANDS>>F2:
```

```
F2>>
```

Run the Mouse interpreter by typing

F2>mouse

MOUSE, Peter Grogono, 1983; Lee Bradley, 2007

Enter Mouse program's name : hello.mse

Hello, World!

F2>

Congratulations! You have just run the classic "Hello, World!" program in Mouse!

To quit the emulator, type

F2:>halt

0 - Emulator, Interpreter and the classic Hello, World! program
1 - Output string, output character, new line, Mouse's Stack, push character, end program
2 - Loops, variables, assignment, evaluation, comparison, comments, arithmetic, input number, output number
3 - Introduction to defining and calling macros
4 - If, input character, more on macros
5 - Recursive macros, the remainder operator, the small, whole number limitation of Mouse
6 - A few remarks about CP/M and MYZ80
7 - Testing and the trace feature, contact information
