

t = time they
cross
paths
 r = rate of
fast
runner

$$D = r \cdot t$$

$$2.1 = 3.1 - 1 = \left(5\frac{1}{3}\right) t$$

$$(2.1) \left(5\frac{1}{3}\right) = t = 11.2 \text{ min}$$

slow
runner
rate $= r_s = \frac{1}{11.2} \text{ miles/min}$

$$3.1 = r_s t_s$$

$$3.1 = \frac{1}{11.2} t_s$$

$$3.1(11.2) = t_s = \boxed{34.72 \text{ min}}$$
